

INSIGHT 2020

CALL FOR SUBMISSION

SCIENTIFIC DATA FROM AN AESTHETIC PERSPECTIVE

Graphical visualization is an efficient and essential way to present specific information about a large amount of data. Sometimes the act of expanding the view of underlying or superordinate information creates images, which can be astonishingly beautiful. Insight offers researchers the opportunity to present and share their scientific work in order to show how fascinating it can be. Insight enables to see the beauty behind scientific data and brings it to the public. Insight is a way of expressing and communicating science. Insight might make you fall in love with the art of science. So let's spread scientific love!

GIVE INSIGHT INTO YOUR WORK

If you have produced a visualization (no photographic and animated images) of your scientific data during your research, you are welcome to participate at Insight 2020. The represented data should be visually appealing and reveal information contained in the underlying data of your research field. The data will be presented in an exhibition hosted at the TU Wien in Vienna, Austria, and shared with a broader public.

WHY INSIGHT?

The total revenue generated by the sale of the images on exhibition are of benefit to a charitable purpose. In addition, the author of every accepted image has the chance to win one out of two awards. The images are judged based on both their aesthetic qualities and their ability to communicate information effectively.
